High-throughput router for Ku- and Ka-band

The HX90 is a high-throughput capable and highly scalable satellite router that enables operators to provide cost-effective satellite broadband services over Ku- and Ka-band networks. Supporting up to 60 Mbps of multicast traffic throughput, 45 Mbps of UDP throughput or 15 Mbps of TCP throughput, the HX90 delivers exceptional performance. The HX90 includes the full suite of HX System Quality of Service (QoS) features which enable operators to tailor service plans to meet the needs of the most rigorous end users. High-throughput satellite operators can use the HX90 to deliver enterprise and carrier-grade services to users in a cost-effective manner.

Target Markets
- Ku- and Ka-band network
- High-throughput satellite operators
- Internet services
- SCPC/MCPC replacement links
- MPLS extension services
- Embassy and government networks
- Private leased-line services
- Education services

HX System Architecture
The HX System provides true IP broadband connectivity via satellite. The HX System is based on a “star” network topology where the outbound channel is DVB-S2 with Adaptive Coding and Modulation (ACM). The return channel of the HX System is multi-frequency FDMA/TDMA using the IPoS standard for broadband over satellite. With a DVB-S/DVB-S2 outbound carrier and transmit rates up to 3.6 Mbps, the HX90 provides a cost-effective and highly scaleable solution for satellite broadband networks.

Optimizing the Return Channel with LDPC
OQPSK with LDPC coding provides exceptional performance:
- Spectral efficiency is similar when comparing Rate 9/10 versus 8PSK Rate 2/3;
- OQPSK is less susceptible to noise;
- Lower power BUC requirements;
- 8PSK requires larger burst size for coding gain.
Overall, LDPC provides superior performance.

Hughes Outdoor Unit
The HX90 is supplied with the Hughes manufactured outdoor unit. Available in either Ku-band or Ka-band, the Hughes ODU utilizes a constant envelope modulated carrier output that results in exceptional performance and reliability and offers a wide range of dynamic range for uplink power control. The ODU utilizes a highly integrated design with the LNB an integral part of the ODU thereby increasing reliability.

The HX System from Hughes, the world leader in broadband satellite networks and services, is designed and optimized for smaller and mobile networks, including maritime and airborne applications, where the provision of high-quality and high-bandwidth links is paramount. Capable of simultaneous mesh, star, and multi-star configurations, the HX System builds upon the capabilities and global success of the high-performance HN System, incorporating many advanced features pioneered by Hughes, including integrated TCP acceleration and advanced IP networking. Its broadband satellite products are based on global standards approved by TIA, ETSI, and ITU, including IPoS/DVB-S2, RSM-A, and GMR-1.
Features

- Quality of Service features include:
  - Constant Bit Rate (CBR) services
  - Adaptive CBR. Minimum and maximum rates are configurable, as is step size.
  - Committed Information Rate (CIR) with minimum, guaranteed, and maximum rates
  - Best effort with weighted fair queuing
  - Class-based weighted prioritization
  - Multicast data delivery
  - Four levels of IP traffic prioritization
- Bandwidth management
  - Supports both preassigned (static) traffic assignment and dynamic traffic assignment
  - Idle remotes can be configured to release all network resources
- Acts as a local router providing:
  - Static and dynamic addressing
  - DHCP server or relay
  - DNS caching
  - RIPV1, RIPV2, BGP routing support
  - Multicasts to and from the LAN by using IGMP
  - NAT/PAT
  - VRRP
  - VLAN tagging
  - Firewall capability with integrated access control lists
- Supports unicast and multicast IP traffic
- Software and configuration updates via download from the HX Gateway
- Implements dynamic, self-tuning Performance Enhancement Proxy (PEP) software to accelerate the throughput performance by optimizing the TCP transmission over the satellite, delivering superior user experience and link efficiency
- Bidirectional data compression
- IPSec encryption (optional)
- Configuration, status monitoring, and commissioning via the HX ExpertNMS™
- Embedded Web interface for local status and troubleshooting
- User-friendly LED display indicating terminal operational status
- Closed loop control between hub and remote
- Dynamic outbound coding and modulation changes based on received signal
- Dynamic inbound coding changes based on received signal
- Dynamic remote uplink power control
- IPv6 ready

Technical Specifications

Physical Interfaces

- Two 10/100BaseT Ethernet LAN RJ45 ports

Satellite Specifications

- Frequency: Ku-, Ka-band
- DVB-S2 ACM Channel: DVB-S2 with Adaptive Coding and Modulation or DVB-S
- DVB-S2 ACM Rate: 1–45 Msps (in 0.5 Msps steps)
- DVB-S2 ACM Modulation: QPSK, 8PSK, 16APSK (Adaptive Modulation)
- DVB-S2 ACM Coding: BCH with LDPC 1/2, 3/5, 2/3, 3/4, 4/5, 5/6, 8/9, 9/10 (Adaptive Coding)
- FDMA/TDMA (IPoS) OQPSK
- FDMA/TDMA (IPoS) Adaptive Coding
- FDMA/TDMA (IPoS) Channel Coding Rate: 1/2, 2/3, 4/5 with TurboCode
- FDMA/TDMA (IPoS) Channel Coding Rate: 1/2, 2/3, 4/5 and 9/10 with LDPC
- Error Rate (Receive): Quasi Error Free
- Error Rate (Transmit): $10^{-5}$ PLR (equivalent to $10^{-7}$ or better)
- Interface to ODU: Hughes Saturated Carrier BUC

Performance

- Packets per second: 5,000
- UDP throughput: 45 Mbps
- TCP throughput: 15 Mbps
- Multicast throughput: 60 Mbps

Mechanical & Environmental

- Weight (IDU): 1.6 lbs (.726 kg)
- Dimensions (IDU): 8.05” W x 1.55” H x 8.95” D
- Operating temperature:
  - IDU: +32º F (0º C) to +122º F (+50º C)
  - ODU: -22º F (-30º C) to +131º F (+55º C)
- Input power: 90 to 264 VAC; 50 to 60 Hz
- DC power supply (opt.): 12 to 24 VDC
- IPV6 ready
